

## # Project Termination.

~~Group~~ Project

4 fundamental diff ways to close out a project.

- ① Extinction    ② Addition    ③ Integration
- & ④ Starvation.

### ① Termination by Extinction.

- Project stopped because it has been successful & achieved its goals. - New project come.
- Project may also be stopped because it is unsuccessful or has been superseded. - The new drug failed its efficiency tests.
- A special case of termination by extinction is "termination by murder." Ranges from political assassination to accidental projecticide.
- When senior executives vie for promotion;

### ② Termination by Addition

- Used this method of transforming a project into a division of the firm & then if real economic stability seems assured, into an independent subsidiary.

### ③ Termination by Integration.

- Most common method dealing with the successful project, & the most complex.

#### ④ Termination by Starvation.

- It is actually not termination at all.
- It is slow starvation by budget decrement.

# Termination process has two distinct parts.

##### ① The decision Process

● fall into three generic categories.

- Base the decision on the degree to which the project qualifies against a set of factors associated with successful or failed project.
- Base the decision on the degree to which the project meets the goals & objectives set for it.
- There are projects that are fallen far enough behind their schedule.

##### ② The implementation process.

Once it has been decided to terminate the project, the process by which it will be terminated must be implemented.

- The actual termination is planned & ordered as a simple hatchet job.
